Customer ID: **335448**
Certificate: **43-B-3809**
Site: 001
JERED AND SUMMER SMITH

Type: ROUTINE INSPECTION
Date: 18-JAN-2022

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A female Beagle (m/c# 9000085000931569) with 1 puppy was observed to have a dull, coarse hair coat and on closer observation, she was somewhat thin, with an abdominal tuck. Her mucous membranes were slightly pale. These signs can be the result of parasites, inadequate nutrition, or an underlying medical condition. This dog must be evaluated by a veterinarian within 3 days of this inspection, to know with certainty the problem and the correct treatment. Documentation of the evaluation, recommended treatment and delivered treatments must be available to APHIS officials.

To be corrected by: 21 January 2022

Note: an appointment was made for the following morning

3.1(a)

Housing facilities, general.

In the outdoor enclosures, the shelters are large wooden shelters that have a shared wall for 2 enclosures. Twelve of the shelters had excessively chewed walls around the door and the shared walls of the shelters. Dogs from 1 enclosure were able to easily get into the next enclosure. Failure to maintain enclosures can allow for gaps, unstable structures, or loose panels which can result in injury, entrapment, or escape of the animals. Facilities shall be maintained in good repair to protect the animals from injury and contain them.

Inspection Report

Housing facilities for dogs must be designed and constructed so that they are structurally sound. They must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

To be corrected by: 7 February 2022

This inspection and exit interview were conducted with a facility representative.
