Type: ROUTINE INSPECTION
Date: 27-OCT-2022

2.40(b)(2) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A fawn male chihuahua, named Prince with microchip # 7E10131672, approximately six years old was found with poor dental health. The licensee noted that she had not noticed his condition. On his right side most of his teeth were about a quarter to halfway covered with a light to dark brown hard substance. The gums on this side were red and swollen. The upper tooth behind his canine tooth had some gum recession with a small amount of root exposure. This tooth was loose and painful to the touch. Anytime that tooth was touched Prince would shy his head away from the inspector. On his left side the front top and bottom teeth were half to three quarters covered with a brown to dark brown hard substance, while the back top and bottom teeth were completely covered in a dark brown material. The licensee called and made an appointment with her attending veterinary for this dog before we continued with the inspection. Poor dental health can cause pain and discomfort to the animal as well as lead to further health issues. This dog must be evaluated by a licensed veterinarian for an accurate diagnosis and to develop an effective treatment plan. Each dealer must follow an appropriate program of veterinary care for dogs that includes preventative care and treatment to ensure healthy teeth for all dogs.
