Customer ID: **4311**  
Certificate: **43-A-6665**  
Site: 002  
Joyce Walters

Type: ROUTINE INSPECTION  
Date: 22-DEC-2023

---

#### 3.11(a)

##### Cleaning, sanitization, housekeeping, and pest control.

At time of inspection the outdoor gravel portion of the sheltered facility were muddy and contained an accumulation of fecal material. The dogs housed in the enclosures were completely soiled with mud and organic debris covering the entirety of their bodies.

The licensee stated that the facility has not had the fecal matter removed for approximately a week. With the current rain and not spot cleaning daily, it has made the gravel portion of the enclosures inadequate to keep the animals housed from being soiled.

Without regular spot cleaning daily and maintaining adequate gravel, it poses a risk of causing soiling of the animals and increased disease hazards. The licensee shall implement a proactive cleaning regimen and additional aggregate to prevent soiling of the animals housed.

To be corrected by 12.24.23

#### 3.11(d)

##### Cleaning, sanitization, housekeeping, and pest control.

At time of inspection there was a significant accumulation of rodent feces in the washdown below the enclosures on the indoor portion of the sheltered facility. The smell of rodent urine was very pronounced upon entering and walking throughout the indoor portion of the sheltered facility. The pest control section in the POVC indicated the use of traps. Traps or other methods of rodent control were not observed in the facility.

Rodent infestation can cause health and well-being issues to the animals housed and contaminate feed sources. The licensee shall consult the POVC to implement the appropriate rodent control method as to minimize the rodent population.

To be correct by 12.29.23

This inspection and exit interview were conducted with Licensee.
