Type: ROUTINE INSPECTION
Date: 03-OCT-2023

3.1(a)

Housing facilities, general.

The current large outdoor pen has two large holes in the ground that are a hazard to the dogs and need to be addressed. One hole is covered with some siding material but not secured down and was shifted, exposing the hole. These are deep holes that could pose a potential hazard to the dogs and need to be addressed to keep the enclosure in good repair.
Correct by: Oct 11, 2023

3.11(d)

Cleaning, sanitization, housekeeping, and pest control.

There was an accumulation of flies and stink bugs throughout the facility. The facility does not have any current program in place that would mitigate or control the number of insects around the kennel. This needs to be addressed and a pest control program in place for the overall health of the dogs.
Correct by: Oct 6, 2023

3.13(a)(4)

Veterinary care for dogs.

The licensee is not currently following the program of vet care which states that dogs hair coats should be checked weekly. A female cavalier identified as "Mathilda" was in the whelping box and had heavily matted ears and matted fur along the back legs. The extensive nature of these matted ears indicate they are over a week old and were not identified or addressed by the licensee. Weekly checks allow these dogs to be identified and have preventative care provided in the manner of grooming to reduce matted fur. The licensee needs to follow his veterinarians plan for the health of the dog.
Correct by: Oct 5, 2023

This inspection and exit interview were conducted with the licensee.
