Type: ROUTINE INSPECTION
Date: 18-OCT-2023

2.40(b)(2) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

An adult male Australian Shepherd dog (microchip 7E10207209) has severe dental disease. A heavy buildup of thick brown material was seen covering most of the teeth on both sides. The gums were bright red and swollen along the gumlines on both sides of the mouth. The front top incisors contained discharge near the base of the teeth with severe gum recession. Heavy buildup on the teeth with redness, swelling, recession, and discharge can be signs of dental problems and can cause infection, pain, and discomfort to the animal.

Failure to provide veterinary care when needed can result in prolonged suffering and worsening of the condition of the animal. Licensees must ensure that they establish and maintain programs of adequate veterinary care, including the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries. When animals are identified with injuries or illness, they must seek care by their veterinarian to prevent, control, diagnose, and treat diseases. Correct by ensuring that the animal listed above is examined and treated by a licensed veterinarian. The licensee must ensure that all animals receive adequate veterinary care at all times. Correct by 20-OCT-2023.

2.134(a) Repeat

Contingency planning.

The licensee does not have an adequate written contingency plan. The contingency plan did not address requirements including plans for all reasonably anticipated disasters or emergency scenarios. An inadequate contingency plan can result in lack of readiness and a delay in response to care for animals during emergencies or disasters. Dealers must develop, document, and follow an appropriate plan to provide for the humane handling, treatment, transportation, housing, and care of their animals in the event of an emergency or disaster (one which could reasonably be anticipated and expected to be detrimental to the good health and well-being of the animals in their possession). A contingency plan includes emergency situations the licensee may experience, outlines specific tasks required to be carried out during emergencies such as detailed animal evacuation instructions or shelter-in-place instructions and provisions for providing backup sources of food and water as well as sanitation, ventilation, bedding, veterinary care, identify who will be responsible for fulfilling these tasks, and address how response and recovery will be handled in terms of materials, resources, and training needed. Ensure that an adequate written contingency plan is developed and followed in case of an emergency.

Inspection Report

3.13(a)(3)

Repeat

Veterinary care for dogs.

The written Program of Veterinary Care (PVC) does not include sampling with a schedule for parasites and other pests (including fleas, worms, coccidia, giardia, and heartworm) and no sampling is being performed. Failure to perform parasite sampling with a schedule does not ensure the dogs are adequately protected from diseases and parasites.

The written program of veterinary care must address the requirements for adequate veterinary care and must include vaccinations for contagious and/or deadly diseases of dogs (including rabies, parvovirus, and distemper) and sampling and treatment of parasites and other pests (including fleas, worms, coccidia, giardia, and heartworm) in accordance with a schedule approved by the attending veterinarian. Correct by having the Attending Veterinarian update and approve the written program of veterinary care with all the required information.

This inspection and exit interview were conducted with the Licensee.
