### 3.6(a)(2)(i)

#### Primary enclosures.

An enclosure housing four adult huskies has sharp points on the door. The braided wire fence door has a hole at approximately eye level of the dogs. The hole was repaired with a portion of galvanized fence panel that has sharp points present. Additionally, the door has one strand of barbed wire along the top. Primary enclosures that contain sharp points can subject the animals to injury. Correct by ensuring that primary enclosures are constructed and maintained in a way that they have no sharp points or edges that could injure the dogs. Correct by 22-December-2023.

This inspection and exit interview were conducted with the facility representative.
