#### 3.6(a)(2)(x)

##### Primary enclosures.

The outdoor floor of the southwest enclosure has a slat missing right next to the panel where the dog housed there possibly could have a foot pass through the gap (the dog was observed to avoid this area). To prevent injury; slatted floors need to be maintained in a manner to protect dogs' legs and feet from passing through any openings. Ensure that this area is repaired and that the slatted floors are maintained in a manner that protects dogs' feet from the possibility of passing through openings in the floor.
