Type: ROUTINE INSPECTION
Date: 21-AUG-2024

2.50(a)(2)

Time and method of identification.

The licensee currently does not have a method of identification for four litters of unweaned puppies (thirteen puppies in total). The litters were born July 10, 2024, July 30, 2024, August 5, 2024, and August 6, 2024, respectively. Proper identification of puppies is important for disease traceback and in cases of theft or loss. Correct by ensuring live puppies less than 16 weeks of age have proper identification, such as an official tag, tattoo or microchip, APHIS 7005 form, or a cage card. Correct by: August 28, 2024.

3.11(a)

Cleaning, sanitization, housekeeping, and pest control.

The licensee is not removing fecal excreta from primary enclosures daily. Four enclosures housing a total of 4 adult dogs and 7 puppies had carpet remnants that were heavily soiled with frayed edges. Additionally, five enclosures that are not currently housing dogs also had carpet remnants that were heavily soiled with fecal excreta and had frayed edges. The enclosures have not housed dogs for several days. It is important for daily removal of excreta to prevent attraction of pests and accumulation of odors. It is also important for the overall comfort of the animals. Correct by ensuring excreta be removed from primary enclosures daily to prevent excessive accumulation, soiling of the dogs contained within, and to reduce disease hazards. Correct by: August 24, 2024.

3.13(b)(3)

Veterinary care for dogs.

The licensee did not create a medical record of the administration of the adult dogs' distemper and parvovirus vaccines. The last recorded vaccine administration date was April 12, 2023. The licensee states that the vaccines were administered this spring, but he did not make a record of it. The Program of Vet Care prescribes for the distemper and parvovirus vaccines to be given yearly. Distemper and parvovirus are contagious viruses and may cause dehydration, discomfort, and stress if dogs become infected. Correct by ensuring the names of all vaccines administered and the date of administration is recorded on a medical record which can be made available to APHIS inspectors during an inspection. Correct by: August 28, 2024.

This inspection and exit interview were conducted with the licensee.
