Type: RE-LICENSE INSPECTION  
Date: 11-JUL-2024

---

#### 3.9(a)

##### Feeding

There were 5 stainless steel self-feeders that contained multiple pieces of dog food that were not sufficient for consumption. The pieces of dry dog food had a fuzzy, white-grey material growing on them, which appeared to be mold. Some pieces of food were also caked onto the bottom/sides of the feeder. The enclosures these feeders were attached to house a total of 11 dogs. Having food contaminated by mold in the feeders is problematic in case a dog was to ingest the food, which could cause intestinal upset or other illness. Additionally, non-consumable food could increase the potential for attracting pests and causing unpleasant odors in the kennel. It is unclear when the feeders were last cleaned and sanitized. The applicant disposed of the moldy food and cleaned the feeders at the time of the inspection. Correct by ensuring food fed to the dogs is uncontaminated, wholesome, and palatable.

This is a 2nd Re-License Inspection for a Class "B" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 1 more inspection or by August 24, 2024, or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
