Type: ROUTINE INSPECTION
Date: 03-SEP-2024

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A female black and tan Yorkshire Terrier, date of birth 7-2-19, with the ID tag number 187 had a health condition requiring diagnosis and treatment in consultation with the attending veterinarian. There was a moderate build-up of hard brown material on the surface of the cheek teeth especially along the upper part of the teeth near the gum line. The gums did not appear red or swollen and the dog was in good body condition. The Program of Veterinary Care on file did not address the condition or provide any treatment options. The licensee had not observed the condition and had not contacted the attending veterinarian.

The abnormal build-up of material on the teeth can cause damage to the gum tissue and tooth structures. This condition could be painful, may decrease the dog's ability to eat normally, and may result in spread of bacteria to other parts of the body such as liver and kidneys which can negatively impact the overall health of the animal.

The licensee must communicate with the attending veterinarian to evaluate the dog and determine an appropriate plan for diagnosis and treatment.

Correct by: September 10, 2024

This inspection and exit interview were conducted with the licensee.
