Site: 001
DAVID WEAVER

Type: FOCUSED INSPECTION
Date: 19-JUL-2023

3.11(d) Repeat
Cleaning, sanitization, housekeeping, and pest control.

Excessive amounts of flying insects remain throughout the facility. The insects were found on the inside of the facility and also on the outside runs. Four fly strips were placed inside and are completely filled with insects. The inspection report dated 6-JULY-2023 had a correction date of 13-JULY-2023 for the insects but the licensee states they just started placing insect bait a few days ago. Insects can spread disease, contaminate food and water, and cause discomfort and distress to the animals. An effective program for the control of insects and external parasites affecting dogs must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas. The licensee must establish an effective plan for the control of the insects.

The Direct Non-Compliant Item on the inspection report dated 06-JULY-2023 has been corrected.

This inspection and exit interview were conducted with the Licensee.
