Date: 24-OCT-2024

3.7(c)

Compatible grouping.

One puppy with a date of birth listed as 8-24-24 is being housed in the same enclosure with 2 adult dogs. The licensee stated that one of the adult dogs is the puppy's dam. Very young animals housed with adult dogs that are not their dam or foster dam are at increased risk of injury and exclusion from critical resources such as food and water. Correct by ensuring that puppies under 16 weeks of age are not housed in the same primary enclosure with other adult dogs unless it is their dam or foster dam.

To be corrected by 11-4-24

3.11(a)

Cleaning, sanitization, housekeeping, and pest control.

The indoor portion of two primary primary enclosures is heavily contaminated with fecal material. In both enclosures the fecal material has been flattened and smeared across the floor when the dogs walk through it. Fecal material covered approximately 50 percent of the floor in one enclosure housing 2 adult dogs and 80 percent of the floor in one enclosure housing 2 adult dogs and one puppy. Failure to provide adequate cleaning and sanitization in the primary enclosures increases the risk of disease transmission, attracts insects/pests, and increases odors. Excreta could potentially cause soiling on the body of the dog being housed in the affected enclosure. The licensee must remove excreta and food waste from the primary enclosure daily and from under the primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors.

To be corrected by 11-4-24

This inspection and exit interview were conducted with a facility representative on 24 Oct 2024. Exit interview was completed with licensee on 29 Oct 2024.
