FULTON, KS 66738

Customer ID: **20774**  
Certificate: **48-A-2244**  
Site: 001  
ERIC and Vickie Laderer

Type: ROUTINE INSPECTION  
Date: 11-MAY-2022

---

#### 2.40(b)(2)

##### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

\* The following medication used to treat the dogs at the facility is past the labeled expiration date. The recorded expiration date on one 100 ml bottle of Oxytocin was 09/2021. This medication was intermingled with other products that are currently being used at the facility and is therefore ready for use. The usage of expired drugs on regulated animals is not considered to be an acceptable veterinary practice and does not constitute adequate veterinary care. The effectiveness of the dosage level and expected results when expired drugs are administered could be drastically changed or may not work as anticipated. The licensee must ensure that all medications used on the dogs must be current and have not gone past the recorded expiration date. Correct by 5/25/22.

#### 3.1(a)

##### Housing facilities, general.

\* An estimated four by eight-inch hole was observed in the chain link enclosure divider fencing. One dog is in contact with the affected fencing located in an outdoor enclosure. The ability to contain the animal securely is greatly affected and could lead to potential injury, if the enclosure divider fencing is not kept in good repair. Containment of the animal is necessary for protection from potential escape or injury which could have a negative impact on the well-being of the animal. Housing facilities for dogs must be designed and constructed so that they are structurally sound, kept in good

---

repair, protect the animals from injury, contain the animals securely, and restrict other animals from entering. Correct by 5/18/22.

#### 3.1(f)

##### Housing facilities, general.

\* Fecal waste was observed accumulating on the elevated ground floor in one outdoor enclosure housing one dog. An estimated 25 percent of the total floor area was covered with fecal waste. The licensee estimated the waste buildup to be a weeks' worth. Fecal waste can attract pests and rodents, become a disease hazard or area of contamination to the animal. Odors, insects, disease hazards, and pest infestation from fecal waste accumulations can have an adverse effect on the health and well-being of the animals at this facility. The licensee must provide for the regular and frequent collection, removal, and disposal of animal and food waste, bedding, debris, garbage, water, other fluids and wastes, and dead animals, in a manner that minimizes contamination and disease risks. Correct by 5/18/22.

#### 3.11(c)

##### Cleaning, sanitization, housekeeping, and pest control.

\* There is an overgrowth of grass and weeds surrounding one outdoor enclosure housing one dog. The grass and weeds were estimated to be one foot in height. This could provide a living area for rodents, other pests or vermin. In addition, it makes removal of fecal waste from the enclosure more difficult to do. The licensee must ensure all weeds, grasses, and bushes must be controlled to facilitate cleaning of the premises and pest control, and to protect the health and well-being of the animals. Correct by 5/25/22.

This inspection and exit interview were conducted with the licensee.
