Type: RE-LICENSE INSPECTION
Date: 05-APR-2022

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility had several expired products; GI Synbiotics paste expired 03-March-21, Bottle of Oxytocin expired August 2018 and Esbilac puppy milk replacement powder expired April 2021. Expired products have reduced effectiveness in treating animal medical problems. The facility discarded these products at the time of inspection.

2.50(a)(1)

Time and method of identification.

There are 2 Pomeranians and 1 Dachshund that are approximately 6 months old and have no official identification. Official identification is necessary for APHIS officials to be able to trace animal movements. The facility must assign an official identification number and place it on the dogs.

2.50(a)(2)

Time and method of identification.

There are 2 Pomeranians puppies approximately 8 weeks old and have no official identification. Official identification is necessary for APHIS officials to be able to trace animal movements. The facility must assign an official identification number to each of these dogs.

2.75(a)(2)

Records: Dealers and exhibitors.

Inspection Report

There are 2 Pomeranians and 1 Dachshund that are approximately 6 months old and are not listed on the facility's Record of Acquisition and Dogs on Hand (APHIS Form 7005). Record of Acquisition and Dog on Hand forms are necessary for APHIS officials to track animal movements. The facility must make, keep, and maintain the acquisition information for all dogs on the premises at all times.

3.13(a)(3)

Veterinary care for dogs.

The facility is missing information on the routine for heartworm testing and fecal sampling. There is no guidance currently provided in their program of veterinary care for the percentage or total number of dogs to be sampled and the frequency of which they should be tested for heartworm and intestinal parasites.

Heartworm disease is caused by a parasite that can cause significant damage to the heart before visible symptoms are seen. Likewise, intestinal parasites can cause chronic disease that can be difficult to detect. Intestinal parasites can also be spread from mother to puppies. Because of these risks to the health of dogs and puppies, regular testing is necessary to ensure control and early detection.

The facility's Program of Veterinary Care provides a schedule for adult dog rabies vaccinations. It states adult dogs will be vaccinated annually for the first rabies vaccine and then every 3 years. 7 dogs are overdue for their rabies vaccinations; Dixie, Christa, Breanna, Bella, Beauty, Frisky and Fluffy. Maintaining a vaccination schedule is necessary to ensure the dogs are protected from contagious and deadly diseases.

Each dealer must follow an appropriate program of veterinary care for dogs that is developed, documented in writing, and signed by the attending veterinarian and includes sampling and treatment of parasites and other pests and a vaccination

Inspection Report

schedule in accordance with a schedule approved by the attending veterinarian. The facility must consult with their attending veterinarian and add a schedule for testing for heartworms and intestinal parasites to the Program of Veterinary Care. The facility must vaccinate the dogs that are overdue for the rabies vaccine or provide a statement from the veterinarian if the dogs are not able to be vaccinated at this time.

This is a 1st Re-License Inspection for a Class "A" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by 4-June-2022 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
