Site: 001
KEVIN EUGENE MILLER

Type: ROUTINE INSPECTION
Date: 24-OCT-2024

3.13(b)

Veterinary care for dogs.

Records of administration of anti-parasitic medications for intestinal parasites were not maintained for adult dogs sold and held by the licensee. The written Program of Veterinary Care, signed and dated 7/12/2024, required that pregnant females receive a course of fenbendazole treatment from 55 days of pregnancy to 5 days after whelping and another 10-day course of treatment starting at 4 weeks after whelping. The Program of Veterinary Care also called for a 10-day course fenbendazole treatment 3-6 times per year for non-pregnant females and adult males. The licensee stated that he has been administering the fenbendazole to his adult dogs as described in the Program of Veterinary Care; however, he has not been documenting this activity.

Medical records are essential for APHIS inspectors to evaluate the quality of medical care provided by the facility and ensure the animals are protected from disease, injury, and illness.

The licensee must keep copies of medical records for dogs and make the records available for APHIS inspection. These records must include routine husbandry procedures (such as vaccinations, preventive medical procedures, and treatments) performed on all animals.

To be corrected by the close of business on 11/1/2024.

This inspection and exit interview were conducted with the licensee.
