3.6(a)(2)(iii) Critical

Primary enclosures.

An adult female Mini Australian Shepherd (microchip number 1657) escaped from the facility on 01-September-2022. The facility representative was unsure how the dog escaped the enclosure. However, the disposition records (APHIS 7005 form) noted the date of the incident and that the dog had jumped out of pen and ran away. The outside runs of the primary enclosure has fencing that is approximately 34 3/4 inches tall and have open tops. The dog that escaped was not recovered by the facility. Primary enclosures that do not safely contain the animals can lead to animal escape that can expose the animals to injury or death. The licensee must ensure that all primary enclosures are constructed so that they contain the animals securely. Correct by 12-April-2023.

This inspection and exit interview were conducted with the Facility Representative.
