Site: 001
Moon Dance Aussies

Type: ROUTINE INSPECTION
Date: 21-FEB-2024

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A 2-year-old male Australian Shephard dog ("Axel", microchip #900235004944160) had matted hair on his back end. There were numerous round balls of hair and organic matter under the base of the tail area. The licensee stated that she had not observed these mats prior to the inspection. Mats may cause discomfort, and may create or hide skin conditions in the area under the mats. Correct by 3/1/24 by ensuring that all dogs are observed on a daily basis to ensure that issues (including mats) are promptly identified and treated. At the time of the exit interview, the dog had been groomed and all mats removed.

This inspection and exit interview were conducted with the licensee.
