Type: ROUTINE INSPECTION
Date: 27-JUL-2023

3.6(a)(2)(ix)

Primary enclosures.

There are two panels in the outdoor area of the sheltered enclosure that have approximately 3 inch areas of rusted pipe that had broken through about 1/3 of the diameter of the metal pipe. These areas of rust prevent the panels from being fully cleaned and sanitized. Areas that can not be fully sanitized can become harborages of disease and rusted edges could cause injury to the animals. Correct by date August 4th 2023 by ensuring all parts of the primary enclosure that the animal comes into contact with are able to be adequately sanitized and cannot injure the animals.

This inspection and exit interview were conducted with a facility representative.
