Type: ROUTINE INSPECTION
Date: 02-MAR-2022

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

An approximately 2-year-old male Shih Tzu x Poodle, "George", (Microchip # 93202000580029) was seen acting normally in his enclosure, however, the inspector saw his left eye completely covered with matted hair. On closer inspection of the eye the matted hair was mainly the hair above the eye hanging down so you couldn't see the eye. The mat had brown crusty material in it with some crusty material on the inner corner of the eye as well. There was also a small amount of greenish discharge seen on the surface and the corner of the eye. The eye itself looked bright red. The licensee stated that she was not aware of this dog's condition. Once made aware of this dog's condition the licensee, following their Program of Veterinarian Care, shaved the mat and treated the eye for the time being. This dog's matted hair around the eye, crusty material and discharge from the eye could be due to a variety of veterinary medical conditions which may lead to pain and/or discomfort. The licensee must consult with a veterinarian regarding this dog's condition in order to determine an appropriate diagnosis and treatment plan which must be followed and documented. The licensee must ensure that adequate daily observations are performed to assess the health and well-being of all animals. A mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian so that an appropriate plan for diagnosis and treatment can be determined.

To Be Corrected: 3-5-2022
