**2.40(b)(2)**                      **Direct**                      **Repeat**

**Attending veterinarian and adequate veterinary care (dealers and exhibitors).**

Female pomsy (tattoo #14, microchip #892981) is lame in both hind legs. The inspectors observed the dog to appear painful on both hindlegs as she moved around the enclosure. The dog often held one of the hind feet of the floor as she moved or would rock her weight back on the heel of the foot with the toes held off the flooring when standing. Closer inspection of the dog revealed a raw, red, open lesion on the pad of one toe on each hind foot. The dog is housed on raised expanded metal flooring and the affected area of the toes are rubbing against the metal when the dog is walking. The condition of the dog has not been noticed and no treatment has been provided. This dog was moved to an enclosure with a different type of flooring during the inspection. The behavior of this animal indicates that the open lesions are painful and if left untreated could lead to further health issues.

Female Boston terrier (microchip #991001003375932) appears very painful on the left hind leg. The inspectors observed the dog stretching the leg out behind her several times while standing and holding the foot off the flooring. While moving around the enclosure, the dog showed signs of severe lameness and often failed to bear weight on the leg. Closer inspection of the leg revealed a raw, red, open lesion on the pad of one toe. The condition of the dog has not been noticed and no treatment has been provided. The behavior of this animal indicates that the open lesions are painful and if left untreated could lead to further health issues.

## Inspection Report

---

Female Ore-pei (tattoo #27, microchip #7E10180551) is lame on the left front leg. Closer examination revealed the entire leg is swollen from the elbow to the foot. Numerous dark red wounds are located on the medial, lateral, and posterior sides of the leg. The condition of the dog has not been identified and no treatment has been provided. The behavior of this animal indicates the swollen leg is painful and could also suggest there is an underlying health issue such as infection. If left untreated it could lead to further health issues.

Female Shih tzu (tattoo #10) has an abnormal condition of the right eye. The eye appears cloudy and has a blueish color. The white of the eye is moderately reddened and a dark red area is located in the center of the eye. The hair surrounding the eye is wet and coated in discharge. The dog was observed squinting the eye and hesitant to fully open it. The condition of the dog has not been noticed and no treatment has been provided. The behavior of this animal indicates the condition of the eye is painful and if left untreated could lead to further health issues.

Female Cavalier spaniel (tattoo #2, microchip #882806) has an abnormal condition of the right eye. The eye appears cloudy and the white of the eye is moderately reddened. A brown discharge is located along the bottom eyelid and the hair surrounding the eye is wet. The condition of the dog has not been noticed and no treatment has been provided. Abnormal conditions of the eye could cause pain and discomfort to the animal and if left untreated could lead to further health issues.

Female bulldog (tattoo #37, microchip #7E10334731) has an abnormal condition on both front feet. Each foot contains a large red lesion between the toes. A darker red area is located on the surface of each lesion and appears to be slightly wet. The condition of the dog has not been noticed and no treatment has been provided. Abnormal skin conditions could

cause pain and discomfort to the animal and if left untreated could lead to further health issues.

The above-mentioned dogs must be evaluated by a veterinarian for an accurate diagnosis and to establish an effective treatment plan. The licensee must ensure that each animal receives adequate veterinary care at all times.

At the time of the inspection a veterinarian examined and established a treatment plan for each of the affected dogs.

This inspection and exit interview were conducted with the facility representatives.

Additional Inspectors:

William Janecke, VETERINARY MEDICAL OFFICER
